

Digital harvest – for maximal efficiency

A mobile software programme, that makes harvest more efficient and payment transparent and detectable: Our scale D 110 transfers the weighing-data wireless and in real time via WLAN in the Data-Cloud from our cooperation partner cony. The cloud offers a clearly represented internet platform with an overview of the complete weighing-data. The app connects both to the scale and the cloud. It's

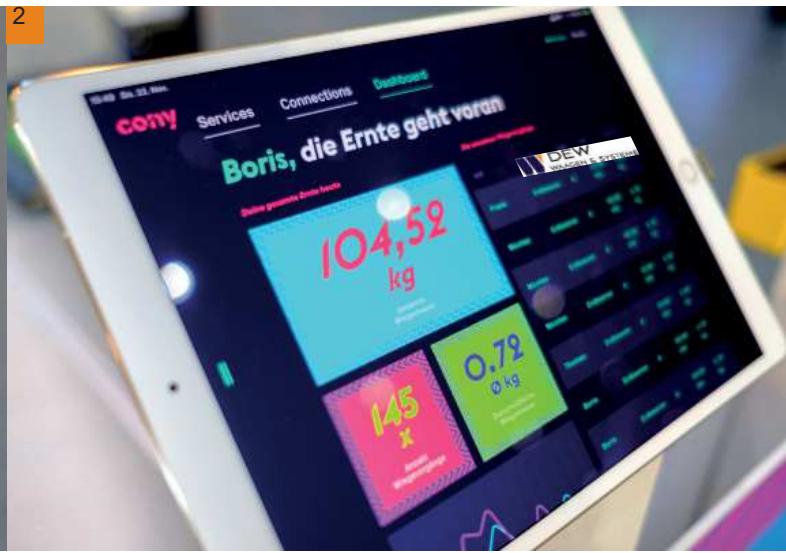

the easiest way to show and to augment your weighing data in real time. So our clients save time and work. Also the weighing-data are personalized in the moment of saving – meaning that they are assigned to the corresponding worker. Defective payment gets impossible. All this you achieve with low effort: In addition to the app by cheap subscription you only need the WLAN-scale D 110 made from stainless steel.

Saving of time and work

Data storage in real time

Weighing-data are saved wireless and in real time via WLAN in the Data-Cloud. The cony app connects both to the scale and the cloud. It's the easiest way to show and to augment your weighing data in real time. **Advantage:** Because of direct and wireless saving of weighing-data it is possible to weigh the harvest on the field – immediately after harvesting. Without additional working hours and with guaranty of an exact transfer and automatically documentation. That means: Nevermore disorder with many documents.

Clearly represented documentation

The cloud offers a clearly represented internet platform with an overview of the complete weighing-data. The internet platform offers the opportunity to transfer the data to the EDV-System of your business or to a software of spreadsheet analysis (Microsoft Excel for example).

Detectable payment - crop yield is personalized

In the moment of saving the weighing-data are personalized. That's the way it works: After the scale has captured the weighing-data of the harvest, a cheap off-the-shelf NFC-chip-bracelet identifies worker – no more fiddling on the screen!

Each worker gets his personal internet-address. The address offers a complete overview of all his weighing processes, his total amount and even in case of piecework his expected payment in real time.

Advantage: The weighing-data of the crop yield are detectable and personalized – defective payment gets impossible.

Components of digital harvest

WLAN-Scale D 110

The calibratable indicator D110 possesses a high quality stainless steel case with moisture proof (protection class IP 68), numeric keyboard and tare preset for fast processes. The display possesses backlight. Available with incorporated battery. The related electronic stainless steel platform is strong, dust and watersplash protected (class IP 67).

Cloud for digital harvest

We have realized the cross-linking of the scale and the personalized identification with our cooperation partner cony. The cony-cloud saves your encrypted data – and shares them via open APIs to create your personal digital workflow. Pass on your weighing values, user IDFs and more directly to great third party services, such as Google Spreadsheets, ERP Systems and many more! The cony app connects both to the scale and the cloud. It's the easiest way to show and to augment your weighing data in real time. No software has to install on your personal computer. You can access from everywhere at the app.

Get your weighing workflow smart!

NFC bracelet

A cheap off-the-shelf NFC chip identifies worker, supplier or objects – no more fiddling on the screen!

cony.app

The cony app connects both to the scale and the **cony.cloud**. It's the easiest way to show and to augment your weighing data in real time.

Possible micro apps:

- weigh & assign user
- weigh & assign product
- count items (based on weight)
- select list items
- etc.

DEW connected scale

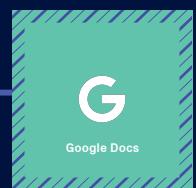

A high quality calibrated scale by DEW – dut with a digital twist: WiFi & bluetooth ready with the **cony.controller**, it's ready to connect to the digital world.

www.cony.io

Individual dataviews

Share lists and values with workers, clients and partners with a simple link. View the data on your mobile or desktop computer without installing an app. Also works magically with the cony NFC tags!

cony.configurator

Manage your data inputs and outputs, create rules, connect services and configure your micro apps. All with a simple-to-use interface. No IT guy needed!

Instant synchronisation

Pass on your weighing values, user IDs and more directly to great third party services, such as Google Spreadsheets, ERP Systems and many more!
